

## LISP Programming Assignment

- 1) Write a LISP program that allows a user to create an address book and perform the following operations:
  - a) Add a new contact to the address book (a contact should have a name, phone number, and email address).
  - b) Search for a contact by name and display their phone number and email address.
  - c) Print the entire address book.
- 2) Implement the quicksort algorithm in LISP. Your program should take a list of integers as input and return the sorted list as output.
